Moaz Alnahas Alhumsi

Informatic Engineer

Profile Summary

A Informatics Engineering graduate with a strong background in software development , especially using the flutter framework , Experience in cross-platform application development, implementing software project that rely on databases and web design skilled in creating innovative solutions,demonstrated through projects like a Maze Game Algorithm and Age Detection system. Currently building and marketing
a personal brand, and interested in modern technologies such technologies such as sign language.

Skills

Leadership , Problem Solving , Creative thinking , Quality and accuracy ,Communication skills

Work Experience

flutter fronted end | 2023

- Experience in designing and developing cross-platform application usnig state management bloc,Getx

Courses & Certifications | 2023

- PHP , SQL , Web Design , C# , Flutter

IBrand Creation & Marketing | 2022-2023

- Found a personal brand and currently managing its marketing strategy, including digital campaigns and content creation to increase brand awareness

TECHNICAL SKILLS

- Flutter / Dart
- State Management: BLoC, GetX
- Version Control: Git, GitHub, GitLab
- API Tools: Postman
- UI/UX Tools: Figma
- Backend Communication: REST APIs, GraphQL

Education

information technology for science & technology daraa - 2018-2024

Bachelor of information Technology , Software engineering networks and artificial intelligence

Primary , preparatory & Secondary stages | 2005-2017

- High School Graduate

Project

American Sign Language | JULY 2024

Developed an model based on sign language to help individuals with hearing impairments communicate using ai

Maze Game Algorithm | FEB 2023

Developed an algorithm for a computer to solve a maze using A* and BFS algorithms for the best and shortest path without issues

BMI APP | JUN 2023

Developed application can calculate BMI for humans with sign in and sign up

MRB Coin App | FEB 2025

A digital wallet app for managing internal crypto transactions. Used BLoC for state management, Formz for validation, and integrated REST APIs with Dio.

Shisha App | MARCH 2025

An ordering app for shisha and drinks. Implemented item selection, dynamic pricing, and location handling with BLoC and SharedPreferences.

PlayStation Café App | JULY 2025

A booking system for PlayStation café sessions. Used BLoC to manage session flow and user state, with location and map integration via Google Maps.

Tammini App | JAN 2025

A location-based safety alert app. Built with GetX for real-time state updates, Google Maps integration, geofencing, and compass-based direction tracking.

WARRAQ | AUG 2025 Until Now

A document/library management app with local storage and server-based authentication (sign in/sign out). Used BLoC for state management, SQLite (sqflite) for offline data, and implemented Clean Architecture with Use Cases.

HOLY QURAN | OCT 2025

A fully offline Quran app featuring surah download on demand, audio playback with background mode, prayer time reminders, and an adhan/alarm system. Built with BLoC and structured using Clean Architecture / Clean Code principles.

MASSAR | SEP 2025 Until Now

An online-only app (no local storage) relying on API-driven data. Integrated network features using BLoC state management and followed Clean Architecture / Use Case approach for maintainable, scalable code.
